GOAL OVERVIEW

This full body routine is perfect for those that are limited on time or looking to optimize their training with as few exercises as possible. All 6 exercises in this routine will target all major muscle groups in your body (except calves, but who really needs those? 😊).

3-DAY FULL BODY SPLIT

Since this is a full body routine targeting all muscle groups, you'll want to ensure you have adequate rest in between workout sessions. You should aim to rotate through these workouts 2-3 times per week. All you should have to do is rotate between "Workout A" and "Workout B".

Note that Workout A targets heavier weights and lower reps, while Workout B targets higher reps and lower weight. You can rotate through these 2-3 times per week, but if you find that doing the strength-based workout in Workout A is too much for your body to recover from, then shift to that to only one time per week and Workout B for 1-2 times per week.

Your workout routine will consist of 3 workouts per week and will look something like this:

MONDAY	TUESDAY	WEDNESDAY	THURSDAY	FRIDAY	SATURDAY	SUNDAY
Workout A	Rest	Workout B	Rest	Workout A	Rest	Rest

MONDAY	TUESDAY	WEDNESDAY	THURSDAY	FRIDAY	SATURDAY	SUNDAY
Workout B	Rest	Workout A	Rest	Workout B	Rest	Rest

The exact days that you work out on don't matter. The key is that you are getting at least 4-5 rest days per week so that you have a rest day in between each of the workouts.

Lastly, each exercise listed in this workout routine has an exercise alternative at the end of this PDF that you can use as a swap. Whether it's because of limited equipment availability, because of a past injury or limitation, or wanting to switch your routine up later down the road, you can use this list to help find an exercise more suitable for you.

SHORTCUT YOUR TRANSFORMATION

Want a proven, step by step plan to build a body you're proud of?

Our science-based programs take all the guesswork out of your training and nutrition, and guides you every single week to help you build a body you're proud of.

So you can:

- Gain Lean Muscle
- Lose Stubborn Fat
- Look Better In Your Clothes
- Improve Muscle Definition
- See The Changes In The Mirror
- Get Stronger
- Feel Confident About Your Body

In just a few months you can love the way your clothes fit, how your physique improves and find the confidence you never knew you could have.

BWS programs work. It's worked for thousands of others and will work for you.

To get started today, click the link below to take our free fitness quiz and find the best program for you and your body:

START MY TRANSFORMATION

WARM-UP ROUTINE

PART 1: LOW INTENSITY CARDIO (optional, ~5 minutes)

- This can be light cycling, walking, the elliptical, etc.
- This is recommended if you have been sitting at work all day and/or live in a cold environment

PART 2: DYNAMIC STRETCHING (~5 minutes)

See the next pages for the picture tutorials.

EXERCISE	REPS	NOTES
Arm Circles	5 each direction	Swing your arms in one direction for 5 reps and then do 5 reps in the reverse direction.
Band Over-and-Backs	5	Use a wide overhand grip and bring the band over and behind your body.
Band Pull-Aparts	10	Use an overhand grip shoulder width apart, and use your mid back muscles to pull the band apart.
Band External Rotations	10 per side	Face sideways to band, lock elbow by side, rotate hand outwards then back in. Can be done with cables instead.
Weighted External Rotations	10 per side	Use light weight, keep elbow locked, rotate hand up towards ceiling then back down.
Forward Leg Swings	5 per side	Hold onto a fixture by your side for support, swing your leg front and back as far as your leg will go.
Side Leg Swings	5 per side	Hold onto a fixture in front of you for support, swing your leg side to side as far as your leg will go
Deep Squat	1 (hold it for 30 seconds)	Hold a weight plate in front of your chest in a deep squat, rock side to side over each ankle.
Dead Bug	5 per side	Keep core engaged, extend opposite arm and leg.

PART 3: WARM-UP SETS (~5 minutes)

SET	WEIGHT	REPS	REST
1	50% working weight	8	1 minute
2	70% working weight	3-4	1 minute
3	90% working weight	1-2	2 minutes
BEGIN WORKING SETS			

3 warm-up sets are needed only for your first upper body and lower body exercise. After that, you don't need to do warm-up sets for the rest of your exercises. However it can still be a good idea to do 1 quick warm-up set to practice the technique.

WARM-UP EXERCISE TUTORIALS

LOW INTENSITY CARDIO

Optional, ~5 minutes

WHY

For a soft, general warm up of all muscles.

HOW

Perform at a comfortable pace any of the following: light cycling, walking, elliptical, etc.

WARM-UP EXERCISE TUTORIALS

ARM CIRCLES

5 reps each direction

WHY

To warm up and mobilize the shoulder joint.

HOW

Swing your arms forward in a circular motion for 5 reps and then repeat in the reverse direction.

WARM-UP EXERCISE TUTORIALS

BAND OVER-AND-BACKS

5 reps each direction

WHY

To mobilize the chest/shoulder area and help with shoulder/scapular stability.

HOW

Hold your band at a little wider than shoulder-width apart. Bring the band over your head and back behind your body while keeping your arms straight. Keep the tension even as you move the band behind you (don't "release the slack" by relaxing or resting your hands on your back/butt), and then bring it back over your head into the starting position. If this is too difficult, widen your hand position. When it gets too easy, narrow your hand position. Avoid arching your back as you perform the movement by slightly contracting your core.

WARM-UP EXERCISE TUTORIALS

BAND PULL-APARTS

10 reps

WHY

To warm up the mid-back and rotator cuff musculature to help with your pressing.

HOW

Hold your band at around shoulder-width apart with an overhand grip. Pull the band apart by squeezing your shoulder blades together. Keep your upper traps relaxed as you do so and focus on feeling your mid-back muscles working. Control back to the starting position and repeat. You can use just one strand of the band OR a wider grip to make it easier, then narrow your grip overtime.

WARM-UP EXERCISE TUTORIALS

BAND EXTERNAL ROTATIONS

10 reps per side

WHY

To warm up the rotator cuff muscles.

HOW

Use either a band attached to a pole or a pulley system with the handle set up at elbow height. Stand beside the cable pulley or band and externally rotate the shoulder while keeping your elbow at 90 degrees and pinned to the side of your body. Control back to the starting position and repeat.

WARM-UP EXERCISE TUTORIALS

WEIGHTED EXTERNAL ROTATIONS

10 reps per side

WHY

To warm up the rotator cuff muscles.

HOW

Use either a band attached to a pole or a pulley system with the handle set up at elbow height. Stand beside the cable pulley or band and externally rotate the shoulder while keeping your elbow at 90 degrees and pinned to the side of your body. Control back to the starting position and repeat.

WARM-UP EXERCISE TUTORIALS

FORWARD LEG SWINGS

5 reps per side

WHY

To mobilize and warm up the hips and leg muscles for your leg movements.

HOW

Keep your core tight and hold onto something beside you. Swing your leg front and back as far as your leg will go.

WARM-UP EXERCISE TUTORIALS

SIDE LEG SWINGS

5 reps per side

WHY

To mobilize and warm up the hips and leg muscles for your leg movements.

HOW

Keep your core tight and hold onto something beside you. Swing your leg left and right as far as your leg will go.

WARM-UP EXERCISE TUTORIALS

DEAD BUG

5 per side

WHY

To mobilize and warm up the core, shoulders and legs.

HOW

Keep core engaged, extend opposite arm and leg, hold the position a moment, go back to the starting position and repeat changing sides.

WARM-UP EXERCISE TUTORIALS

DEEP SQUAT

1 reps per 30 seconds

WHY

To mobilize and warm up the hips and leg muscles for your leg movements, focusing on your hips and ankles.

HOW

Hold a weight plate in front of your chest in a deep squat, rocking side to side over each ankle in a soft and constant motion for 30 seconds.

WORKOUTS

FULL BODY A: HEAVIER & LOWER REP FOCUS

EXERCISE	SETS	REPS	REST (MIN)	NOTES
Close-Grip Incline Bench Press	3	5-10	2-3 min	Move bench 2-3 notches down from top position, grip barbell slightly outside shoulder-width, control barbell down to upper chest, press back up.
Underhand Pull Up	3	5-10	2-3 min	Grip the bar at shoulder-width and with a supinated grip, begin in a full dead hang, pull until chin over bar, slowly lower back to dead hang position, use alternative if unable to do 6 reps in a row.
Cambered Bar Bench Press	3	5-10	2-3 min	Grip slightly outside shoulder-width, descend bar & lift chest to meet the bar, lower to level of nipples for a deep stretch, 1 second pause at bottom, press up to starting position, avoid flaring elbows out.
Deadlift Row	3	5-10	2-3 min	Push hips back, slight bend in knees, lower until hands reach level of shins, chest up and extend hips up and pull barbell up & back towards midsection. Slight momentum in row is okay.
High Bar Barbell Back Squat	3	5-10	2-3 min	Place barbell on upper traps, experiment with foot stance, push hips slightly back & chest up, squat down to at least parallel, elevate heels onto weight plates if needed.
Dumbbell Upright Row	3	5-10	2-3 min	Dumbbells at hips with knuckles forward, pull elbows as high as possible, keep dumbbells close to chest as you pull, control descent back down.

FULL BODY B: LIGHTER & HIGHER REP FOCUS

EXERCISE	SETS	REPS	REST (MIN)	NOTES
Close-Grip Incline Bench Press	3	10-15	2-3 min	Move bench 2-3 notches down from top position, grip barbell slightly outside shoulder-width, control barbell down to upper chest, press back up.
Underhand Pull Up	3	10-15	1.5-2 min	Grip the bar at shoulder-width and with a supinated grip, begin in a full dead hang, pull until chin over bar, slowly lower back to dead hang position, use alternative if unable to do 6 reps in a row.
Cambered Bar Bench Press	3	10-15	2-3 min	Grip slightly outside shoulder-width, descend bar & lift chest to meet the bar, lower to level of nipples for a deep stretch, 1 second pause at bottom, press up to starting position, avoid flaring elbows out.
Deadlift Row	3	10-15	1.5-2 min	Push hips back, slight bend in knees, lower until hands reach level of shins, chest up and extend hips up and pull barbell up & back towards midsection. Slight momentum in row is okay.
High Bar Barbell Back Squat	3	10-15	2-3 min	Place barbell on upper traps, experiment with foot stance, push hips slightly back & chest up, squat down to at least parallel, elevate heels onto weight plates if needed.
Dumbbell Upright Row	3	10-15	1.5-2 min	Dumbbells at hips with knuckles forward, pull elbows as high as possible, keep dumbbells close to chest as you pull, control descent back down.

EXERCISE ALTERNATIVES

If you don't have access to some of the exercises, you can consider swapping those for an alternative one from the same category:

EXERCISE

TUTORIALS

CLOSE-GRIP INCLINE BENCH PRESS

STEP 1: SETUP

Set up an incline bench to about 15 to 30 degrees, typically the first to second notch up from the bottom. Set up a rack for the barbell.

Lie down on the bench and position yourself such that your eyes are directly below the racked bar. Grip the bar with a grip narrower than normal bench press such that it still allows you to touch the barbell to your upper chest.

STEP 2:

After you grip the bar, pull your shoulder blades down away from your ears and then back together. Keep your feet firmly planted on the ground. Then, unrack the bar by lifting the bar up and bringing it over the level of your shoulders.

STEP 3:

While tucking your elbows close to your sides, control the weight down towards your upper chest close to your clavicles until it makes contact with your body. After you reach the bottom position, push the bar up and back to the starting position with your arms fully locked out. As you continue your reps, make sure to keep your chest up and out, shoulder blades back and down, and butt on the bench.

UNDERHAND PULL UP

STEP 1: SETUP

Grip the bar using an underhand grip slightly wider than shoulder-width apart. From here, let your body hang and then begin stabilizing your body by bringing your feet together, flexing your quads and glutes and contracting your abs. You want to maintain this position as you pull.

STEP 2

Initiate the pull by first bringing your shoulders down and away from your ears. Then, pull your elbows down and back into your sides as if you were trying to pull them into your back pockets. As you do this, think about trying to bring your chest up towards the bar. Continue pulling-up until your chin is above the bar. From here, control yourself by letting your elbows move up and out until your arms are almost fully straightened. Try to let your lats fully stretch at the bottom position in a dead hang and then continue into your next rep.

CAMBERED BAR BENCH PRESS

Use a camber bar in your setup - if you don't have access to this, then use a regular barbell.

STEP 1: SETUP

Lie down on the bench and position yourself such that your eyes are directly below the racked bar. Use a medium grip on the bar that's slightly wider than shoulder-width apart. Pull your shoulder blades down away from your ears and pinch them together to create a small space between your lower back and the bench. Firmly plant your feet on the ground. Unrack the bar and bring it over the level of your shoulders.

STEP 2:

Control the weight down while dropping your elbows down at about a 45 to 60 degree angle from your torso. The bar should travel down and slightly forward and touch your chest at the level of your sternum.

The camber bar will allow you to get a deeper stretch in the pecs at the bottom position as you try to meet your chest to the bar.

STEP 3:

After the bar touches your chest, push the bar up and back to the starting position with your arms fully locked out. The bar should travel up and slightly back as you do this. Think about pulling your arms together as if you were trying to touch your biceps together to move the weight up.

ADDITIONAL TIPS

Avoid bouncing the bar against your chest at the bottom position and use control to simply touch your chest. Whenever possible use a spotter, especially with heavier loads.

DEADLIFT ROW

STEP 1: SETUP

Set up the bar in the rack to the level of your mid-thigh. You can also deadlift the bar off the floor up to the starting position. Take a roughly shoulder-width overhand grip just outside your thighs. Take 3 steps back from the rack and use a shoulder width stance with your feet pointed slightly outwards at about a 15 degree angle. At this point your legs should be just inside your hands.

STEP 2

Engage your lats and contract your abs. Take a deep breath in through your nose and start the descent by pushing your hips straight back. Keep just a very slight bend at your knees and keep the bar as close to your body as possible, ideally right above the middle of your feet. Lower the bar only until the point where you can't push your hips back without your lower back starting to round, usually at knee level or mid-shin level.

STEP 3

Keep your core braced and then exhale as you reverse the motion now into the barbell row. Extend your hips up by pushing your hips forward and as you come up, row the barbell up and back towards your midsection. You will use a little bit of momentum from the bottom position to the row.

Control and slowly lower the barbell to the starting position as you come out of the row.

STEP 1**STEP 2****STEP 3**

HIGH BAR BARBELL BACK SQUAT

ATTENTION: For the barbell back squat, since the exercise is quite technical, it is recommended that you [watch the full exercise tutorial video](#). If needed, perform the exercise regression included in the video first if needed before performing the full barbell back squat.

STEP 1: SETUP

Set a barbell in a rack at about the height of your mid-chest. Face the bar and grip it with your hands slightly wider than shoulder-width apart. Duck under the bar and place it over the back of your shoulders, letting it rest on your upper traps. Lift it out of the rack by extending your legs. Take one step back with one foot, one step back with the other one, and then use a third step to correct your stance into an even position. The optimal foot stance will vary, but first experiment with a stance that is just outside shoulder-width with your toes pointed outwards at about 15 degree angle.

STEP 2

Plant your feet firmly into the ground, pull the bar down into your upper back, and engage your core. Take a deep breath in through your nose, and then squat straight down by bending at your hips and knees. As you do so, the bar should remain over the level of your midfoot and the weight should be evenly distributed between your big toe, your little toe, and your heels. Your knees should also be bending slightly outwards in the same direction of your toes. Continue squatting down until your thighs reach at least parallel or slightly below. From here, while keeping your core engaged, exhale and reverse the movement by extending your legs, thinking about bringing the bar up towards the ceiling and exhaling as you do so.

When done correctly, the bar should make an almost perfectly vertical path down and up each rep. Depending on your anatomy, your torso may end up more vertical or more bent over than others, which is normal as long as you're following the tips and avoiding the common mistakes.

ADDITIONAL TIPS: If you find it difficult to reach full depth, you can try elevating your heels onto weight plates to help with ankle mobility.

DUMBBELL UPRIGHT ROW

STEP 1: SETUP

Grab a pair of dumbbells and place them in front of your body with your knuckles facing forwards and slightly down.

STEP 2:

Initiate the row by pulling your elbows as high as possible, up past your shoulders, while keeping the dumbbells as close to your body as possible, knuckles still facing forward and slightly down.

STEP 3:

Control the movement back down by slowly lowering the dumbbells to the starting position. Repeat for desired number of repetitions.

STEP 1

STEP 2

STEP 3
